PROFESSIONAL SUMMARY

Machine Learning Engineer and Data Scientist with experience building scalable, end-to-end ML systems from data ingestion to deployment. Strong expertise in model optimization, feature engineering, and productionizing ML pipelines using Python, SQL, and cloud technologies. Demonstrated impact through improving model performance, reducing system latency, and automating data workflows. Passionate about solving real-world problems with high-performance, production-ready AI systems.

TECHNICAL SKILLS

Languages: Python, SQL, Java

Machine Learning: Supervised and Unsupervised Learning, Regression, Classification, Ensemble Techniques, NLP

Frameworks: Scikit-learn, TensorFlow, PyTorch

Data Processing: Pandas, NumPy, Feature Engineering, Statistical Analysis

MLOps & Deployment: Docker, REST API Development (Flask/Fast API), CI/CD Pipelines, Model Monitoring

Cloud & Systems: AWS, Apache Spark (Basic), Distributed Computing (Fundamentals)

Databases: MySQL, MongoDB

Visualization: Matplotlib, Seaborn, Power BI, Streamlit

Core Concepts: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks

WORK EXPERIENCE

Data Science Intern — Celebal Technologies

June 2025 – August 2025

- ❖ Built and optimized supervised machine learning models and end-to-end data pipelines, leveraging EDA, feature engineering, and hyperparameter tuning (GridSearchCV, cross-validation), improving model accuracy by 15% and generalization by 8%.
- ❖ Designed and automated ETL workflows using SQL and developed interactive dashboards (Streamlit, Matplotlib, Seaborn), reducing data processing time by 20% and enabling data-driven decision-making through effective model evaluation (AUC-ROC, precision, recall, F1-score).

PROJECTS

MailGuard: End-to-End Spam Detection ML Pipeline

- ❖ Built an end-to-end machine learning pipeline for spam detection, including preprocessing, feature engineering, model training, and evaluation on 4,600+ emails
- ❖ Implemented Random Forest and Logistic Regression with hyperparameter tuning and cross-validation, achieving 98% accuracy and 0.97 AUC-ROC
- ❖ Applied feature selection, reducing dimensionality by 30% and improving inference speed by 40%
- ❖ Deployed the model as an interactive web application using Streamlit, enabling real-time spam prediction and user input handling

Micro-Doppler Radar: ML-Based Signal Classification System

- ❖ Developed a machine learning classification system using radar signal data with domain-specific feature extraction (Doppler shift, frequency patterns)
- ❖ Trained and evaluated models (SVM, Random Forest, KNN), achieving 92% accuracy and improving baseline by 23%
- ❖ Conducted EDA and preprocessing to enhance signal quality and model robustness
- ❖ Deployed a real-time prediction dashboard using Streamlit, enabling interactive visualization and automated classification
- ❖ Reduced manual analysis effort by 60% through optimized inference pipeline

CERTIFICATIONS

- Generative AI — Foundations and Applications | Microsoft & LinkedIn Learning (2024)
- Red Hat Certified System Administration (RHCSA) | Red Hat (2023)
- Programming in Java | NPTEL – IIT (2023)
- Introduction to MongoDB | MongoDB University (2024)

EDUCATION

B.Tech — Computer Science & Engineering	Aug 2022 – May 2026
Arya College of Engineering & IT, Jaipur RTU Affiliated CGPA: 8.16 (up to 7th Semester)	
Relevant Coursework: Data Structures & Algorithms, Statistics, DBMS, Machine Learning, Computer Networks, OOP	
Class XII — Science (PCM) RBSE	2021
Bal Bharti Sr. Secondary School, Alwar Percentage: 90.40%	

KEY ACHIEVEMENTS

- Boosted ML model accuracy by 15% at Celebal Technologies through targeted feature engineering and data cleaning pipelines.
- Achieved 98% spam classification accuracy and 0.97 AUC-ROC on the 4,601-email Spambase benchmark dataset.
- Reduced ETL data preparation time by 20% using optimized SQL queries, accelerating downstream ML workflows.
- Outperformed baseline radar classifier by 23%, achieving 92% accuracy on 1,200+ micro-Doppler signal samples.
