PROFESSIONAL SUMMARY

Aspiring Data Scientist with a strong foundation in Python, SQL, statistics, and machine learning fundamentals. Hands-on experience through academic and internship involving data analysis, data visualization, and predictive modeling. Familiar with libraries such as Pandas, NumPy, Scikit-learn. Passionate about transforming data into actionable insights and continuously learning modern data science techniques.

TECHNICAL SKILLS

Languages: Python, SQL

Frameworks/libraries: PyTorch, Pandas, NumPy, sci-kit-learn, Beautiful Soup, Matplotlib & Selenium

Machine Learning: Supervised and Unsupervised Learning, Regression, Classification, Ensemble Techniques

Data Processing: Feature Engineering, Data Wrangling, Statistical Analysis

Data Visualization: Matplotlib, Seaborn, Plotly, Streamlit

Core Concepts: OOP, DBMS, Operating Systems, Statistics, Probability

Tools & Version Control: Git, GitHub (version control, collaborative development)

PROFESSIONAL EXPERIENCE

Data Science Intern — Celebal Technologies

06/2025 – 08/2025

- Built and optimized supervised machine learning models and end-to-end data pipelines, leveraging EDA, feature engineering, and hyperparameter tuning (GridSearchCV, cross-validation), improving model accuracy by 15% and generalization by 8%.
- Designed and automated ETL workflows using SQL and developed interactive dashboards (Streamlit, Matplotlib, Seaborn), reducing data processing time by 20% and enabling data-driven decision-making through effective model evaluation (AUC-ROC, precision, recall, F1-score).

EDUCATION

B.Tech — Computer Science & Engineering, Arya College of Engineering & IT, Jaipur | RTU Affiliated with 8.2 CGPA

09/2022 – 04/2026 | Jaipur, Rajasthan

Class XII — Science (PCM) | RBSE

07/2020 – 06/2021

Bal Bharti Sr. Secondary School, Alwar | Percentage: 90.40%

CERTIFICATIONS

- Generative AI — Foundations and Applications | Microsoft & LinkedIn Learning

PROJECTS

SmartHire AI – Resume Screening & Candidate Tracking System | GitHub [🔗](#)

- Developed an AI-powered ATS system for resume screening, candidate tracking, and recruitment workflow automation using Python and NLP.
- Implemented NLP-based resume parsing, skill extraction, and AI match scoring using TF-IDF and cosine similarity, applying classical ML techniques for ranking accuracy.
- Built an interactive Streamlit dashboard with candidate ranking, analytics visualization (Plotly), and SQLite database integration for end-to-end data management.
- Added authentication, email notification system, and multipage navigation; used Git/GitHub for version control and Streamlit Cloud for deployment.

MailGuard: End-to-End Spam Detection ML Pipeline | GitHub [🔗](#)

- Built an end-to-end machine learning pipeline for spam detection, including preprocessing, feature engineering, model training, and evaluation on 4,600+ emails, applying statistical analysis to validate feature relevance.
- Implemented Random Forest and Logistic Regression with hyperparameter tuning and cross-validation, achieving 98% accuracy and 0.97 AUC-ROC.
- Applied feature selection techniques, reducing dimensionality by 30% and improving inference speed by 40%.
- Deployed the model as an interactive web application using Streamlit, enabling real-time spam prediction; maintained codebase using Git for version control.
